Pre–Phase 2 Requirements (Internal Launch)

1. Based on the results of phase 1, describe how the agent has met the needs of the key populations targeted:

2. Briefly describe the organizational and user risks that the tool presents and any planned mitigations for those risks:

3. Describe who should be granted access to this tool, either by name and e-mail, by department, to everyone across the organization, or by other staff grouping:

4. Describe the key points in the agent process, if any, where human intervention is needed. If human intervention is necessary, describe how the appropriate staff members have been identified and trained to perform the following tasks: observation (visibility into the agent's actions, tool use, intermediate steps, and decisions), control (over agent permissions, constraints, and actions), and intervention (ability to pause, redirect, override, or disable the agent as necessary):

5. If any items from the phase 1 documentation have changed, including performance targets, describe those changes here:

6. The accountable owner should set performance targets according to the following fairness metrics, completing as many as possible. These should represent the minimum values necessary for continued internal use on an ongoing basis.

    a. **Outcome gap: ___ percentage points (_____ : ___ %, _____ : ___ %).** Report the difference between subgroups who were able to complete the task they came to the agent for: they found the needed information, resolved their issue, submitted their information, etc. Measured as the subgroup with the highest rate minus the subgroup with the lowest rate.

    b. **Decision gap: ___ percentage points (_____ : ___ %, _____ : ___ %).** If the agent helps a human make, or itself makes, a consequential decision, report the difference between subgroups provided with materially different decisions. Measured as the subgroup with the highest rate minus the subgroup with the lowest rate.

    c. **Bias gap: ___ percentage points (_____ : ___ %, _____ : ___ %).** Ask each subgroup tester whether the agent perpetuated stereotypes, prejudices, or assumptions about their identity or background. Report the share of participants by subgroup and at least one biased or stereotyped response. Measured as the subgroup with the highest rate minus the subgroup with the lowest rate.

    To calculate these statistics, you'll create two or three structured scenarios based on the AI agent's purpose and intended use. Choose one to three sets of relevant subgroups, based on the potential for plausible harm from using the agent. Ensure that a few members of each subgroup test the AI agent and

collect all responses. Human judgment combined with an LLM-as-a-judge approach may be used at this stage if deemed appropriate, only if human and LLM-as-a-judge metrics have been appropriately tested and validated.

7. Describe how you plan to continually monitor, measure, and report on the statistics defined in phase 1 and the fairness statistics above, with a cadence of at least once per year:

8. Describe the baseline agentic cybersecurity tests run, vulnerabilities found, and mitigations implemented in the following areas during the pilot. If not relevant for this agent, say so:

   a. Unauthorized actions/excessive agency (if the agent can be manipulated into doing things it shouldn't have permissions to do):

   b. Sensitive information disclosure (if the agent contains any private or sensitive information and can be manipulated to expose that information):

   c. Knowledge source poisoning/indirect injection (if the agent uses external sources and treats those external sources as prompt instructions):

   d. Red teaming (have the internal team try to creatively elude safeguards):

9. Name and provide the title of the cybersecurity official that conducted or oversaw the agentic cybersecurity tests and made any necessary mitigations:

10. Check the box below to affirm the following:

    ☐ I have attached the phase 1 documentation to this document.

    ☐ I will make this document, apart from any sensitive security information, available to all users of the agent ahead of testing.

As the accountable owner, I affirm the above to be true and accurate as of _____.

Accountable owner signature: _____

As the security lead, I affirm the above to be true and accurate as of _____.

Security lead signature: _____

As the responsible agentic AI lead, I and the relevant internal governance committee approve the release of this agent as of _____.

Responsible agentic AI lead signature: _____
